Part-time Satellite Clinics

SBHCs Funded by Other Sources

Jackson Complex SBHC

In December of 2005, the doors of the Jackson Complex Health Center were opened. The opening of this health center was made possible through funding from the Kellogg Foundation's Hurricane Relief money. For this past school year, the SBHC was able to remain open through financial assistance from the RKM Community Clinic and grants from various foundations including one from the National Association of Coordinated Health Centers (NACHC). They were able to register 67% of students and 100% of these students utilized the SBHC.

Scotlandville SBHC

Scotlandville Elementary SBHC opened in January 2007 through funding from the Kellogg Foundation as well as the E. Baton Rouge Parish

School System. The school serves grades K through 5 with an enrollment of 448 students, 35.5% of whom are registered in the SBHC and 21% of these students utilized the SBHC.

Natchitoches Central High School-Based Health Center

In February of 2003, CHRISTUS St. Frances Cabrini Hospital opened the Natchitoches Central SBHC and began serving the needs of children through the generous funding of the Rapides Foundation. This grant covered the first three years of operation. This past school year, the SBHC was funded by CHRISTUS St. Frances Cabrini Hospital with the support of the Natchitoches Parish School Board. They were able to register 79% of the students and 59% of these students utilized the SBHC.

St. Helena Central High School-Based Health Center

In 1999, the St. Helena Central High SBHC began serving the students at the High School upon receiving funding from the Health Resources and Services Administration, Bureau of Primary Care. This SBHC has been very successful in getting their students registered and utilizing the SBHC. The staff was able to register 89% of students in the SBHC and 70% of these students utilized the SBHC.

Partnering For Results

Eleven New SBHC Planning Grants Awarded

Thanks to Governor Kathleen Blanco and the State Legislature, additional funds were appropriated in fiscal year 2007 to plan for new SBHCs. In August, OPH/ASHI in conjunction with the Louisiana Public Health Institute (LPHI) and the Louisiana Department of Education (DOE) announced a competitive Call for Proposals for SBHC Planning Grants.

Each proposal was reviewed and evaluated by a Proposal Review Committee drawn from DOE; the

Department of Health and Hospitals' (DHH) Offices of Mental Health, Addictive Disorders, & Bureau of Primary Care; LPHI; as well as other professionals with expertise in areas of the proposed program. Seventeen applications were received and 9 planning grants were funded by OPH, 1 by DHH/Bureau of Primary Care & Rural Health, and 1 by LPHI/SHC.

The following sponsoring agencies are making plans for a new SBHC in their communities.

Sponsor	Parish

Kellogg Foundation Funds SBHC Rebuilding in Metro New Orleans

After Hurricane Katrina, the rebuilding and expansion of SBHCs in the Greater New Orleans Metropolitan area has been supported by an \$8.7 million, 3 year, W.K. Kellogg Foundation Grant Award to the Louisiana Public Health Institute (LPHI). LPHI established the School Health Connection Program (SHC) to administer the Foundation grant funds.

SHC staff work closely with a Steering Committee of SBHC health care providers, school officials and other stakeholders committed to school-based health care. SHC's many accomplishments this year include the funding of:

- A new state-of-the-art modular SBHC facility constructed on the campus of Riverdale High in Jefferson Parish. The site has been open and the staff providing clinical services to students since February 2007.
- A temporary trailer to provide services at McDonogh #35 SBHC in Orleans until a permanent modular building is constructed. The SBHC at Carver High School was destroyed during Hurricane Katrina and subsequently moved to McDonogh #35 High School. The SBHC is expecting a new modular building that will be ready for the 2007-08 school year.
- Expanded mental health services at several area elementary schools in Orleans.
- A SBHC planning grant, awarded to Jefferson Parish School Board, to plan for a new SBHC at West Jefferson High School.

- Additional medical services at OPH-funded SBHCs in metro New Orleans.
- Planning around implementation of an record/practice electronic medical management system for metro Orleans SBHCs.

Regional Mental Health Trainings Conducted

The devastation of Hurricanes Katrina and Rita left many Louisiana children in desperate need of mental health services. Through the generous funding of the Children's Health Fund, a series of four regional workshops and peer consultation groups were conducted this school year. Experts from Columbia University and Children's Health Fund/Operation Assist presented workshops and facilitated peer consultation groups every other month in Metairie, Bogalusa, Baton Rouge, Lafayette, Alexandria and West Monroe to provide much needed information and support to mental health providers across the State.

The training workshops were offered to Office of Mental Health (OMH) mental health professionals in addition to the SBHC mental health staff. The workshops focused on evidence-based interventions with an emphasis on cognitive behavioral therapy (CBT) to treat common mental health disorders of childhood. In addition, the workshops were approved for continuing education credit by the National Association of Social Workers-Louisiana Chapter and the Louisiana Counseling Association.

The training workshops were well received by the SBHC mental health staff. There were a combined total of 357 participants for the series of workshops that took place in September, November, January and February.

A focus group was conducted during the Psycho-social Sub-committee Meeting in April to elicit ongoing needs of the SBHC mental health professionals. They expressed a strong desire for continued professional development. Given the positive response, additional mental health workshops are planned for the 2007-08 school year.

Standardized School Health Forms Implemented

Standardized school health forms have been developed in collaboration with DOE and the School Health Form Advisory Board. Theses forms were designed to eliminate the duplication of information submitted to schools and school nurses and can be downloaded from the ASHI website at

http://www.dhh.louisiana.gov/offices/?ID=255. Forms include:

- School Entrance & General Health Exam Form/Sports Physical Form
- Physician's Authorization for Special Health Care
- Medication Order For Louisiana Public Schools
- Health Information Form
- Authorization for Release of Confidential Information

DOE and DHH have jointly promulgated rules and regulations. These forms are to be used exclusively in schools beginning in August 2007.

Enhancing Revenues Workshop Offered

DHH/Bureau of Primary Care in partnership with OPH/ASHI conducted a one-day workshop for SBHCs in June 2007 on how to enhance SBHC revenues. Topics included evaluating staffing patterns, coding, and optimizing reimbursement potential. Twenty-three SBHC staff members took advantage of this training opportunity.

Fiscal Year	Funding Source	Number of SBHCs
1987-88 1989-90	RWJ grant Louisiana Legislature asks OPH to study SBHC expansion	2 in Baton Rouge 1 in New Orleans

2005-06	Continuation of MCH Block Grant & State Legislative Appropriation.	47 operational SBHCs	
2006-07	Continuation of MCH Block Grant; Additional \$1.6 million in State Legislative Appropriation	52 operational SBHCs 9 planning grantees projected	
2007-08	Continuation of MCH Block Grant; Additional \$855,284 in State Legislative Appropriation.	63 operational SBHCs projected	

Louisiana Standards for School-Based Health Centers

Primary Goal

- To provide convenient access to preventive and primary health services for students who might otherwise have limited or no access to health care.
- To meet the physical and emotional health needs of adolescents at their school sites

Community Participation

All health centers must originate as a community initiative. State funding is dependent upon evidence of broad community participation.

Sponsoring Agency

The sponsoring agency must be either a public or a private non-profit institution locally suited and fiscally viable to administer and operate a health center serving the needs of adolescents (i.e., health center, hospital, medical school, health department, youth serving agency, school or school system).

School and School District

The host school should agree to work cooperatively with its health center, particularly in developing and implementing a full-scale coordinated school health program. School board approval is a prerequisite for a grant of state funds for planning or operation.

Services

A SBHC must offer comprehensive preventive and primary health services that address the physical, emotional, and educational needs of its student population. Services provided should include medical screenings; treatment for common illnesses and minor injuries; referral and follow-up for serious illnesses and emergencies; on-site care, consultation, referral and follow-up for pregnancy, chronic diseases and disorders, and emotional and mental problems; comprehensive physicals; immunizations; laboratory testing; and preventive services to reduce high-risk behaviors.

Parental Consent

A parent or guardian must sign a consent form, approved by school authorities, for a student to receive health center services. Parents may indicate which services they do not wish their children to receive at the centers.

Operating Policies

The hours of operation should ensure that students have easy access to the center's services. In general, a SBHC should have both before and after-school hours and should operate for some period of time during the summer.

Every school-based health center is required to promote abstinence. Centers are prohibited by state law from distributing contraceptives or abortifacient drugs or devices, and from counseling or advocating abortion, or referring any student to an organization for counseling or advocating abortion.

Staffing

Services at the school health centers are provided by multi-disciplinary teams including physicians, nurse practitioners, registered nurses, and licensed mental/ behavioral health professionals. In addition, the SBHC is staffed with a medical office assistant and an administrator.

Selection Criteria

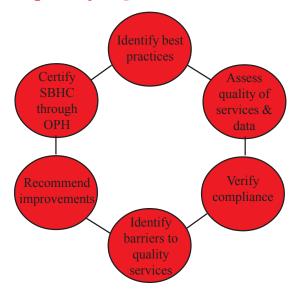

The Adolescent School Health Initiative (ASHI) seeks to provide services to young people with limited or no access to health care providers. Grants are made through a competitive call for proposals process with decisions based upon the socioeconomic and health needs of the student population to be served, the health services available in the communities, the level of community support, the likelihood of success in developing and operating SBHCs that will fulfill its service objectives, and the working relationship between the schools and health care communities.

Continuum of Care

Centers must execute cooperative agreements with community health care providers to link students to support and specialty services not provided at the school site. Centers must arrange 24-hour coverage, ensuring that students have access to services during non-operating hours, including nights, weekends, holidays, and summer vacation.

Continuous Quality Improvement (CQI) Program

Purpose of CQI On-Site Reviews

COI Tools

LAPERT I

focuses on verifying the SBHC self-reported performance in 3 areas: administrative, medical, and behavioral health.

LAPERT II

focuses on core sentinel conditions and consists primarily of patient chart audits and data management assessment.

Results of CQI

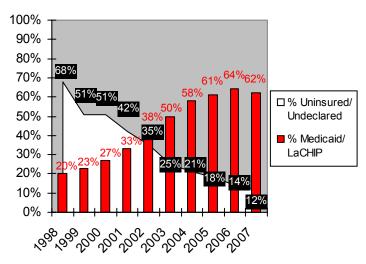

Eight SBHCs underwent a rigorous, on-site quality assurance review this past year as part of the Adolescent School Health Initiative (ASHI) continuous quality improvement program. At seven of those sites the new CQI tool, based on the National Assembly on SBHC's tool, was utilized. The new tool focuses on core sentinel conditions, such as comprehensive physical exams, immunization rates, asthma management, data management, academic achievement, and health insurance enrollment. Improvements continue to be measured.

- > Overall immunization rates improved during the year. When randomly selected charts were audited, the number of students with up-to-date immunizations increased from 51% in the first quarter to 75% in the fourth qarter.
- > SBHCs continue to make strides in reducing uninsured rates. Rates of uninsured students using the health center decreased to 8% over the course of the school year. This is down from 9% in 2005-06 and 13% in 2004-05.
- For students receiving a comprehensive exam, greater-than or equal to 90% of charts audited had documentation of a tobacco screening and, if necessary, counseling to address tobacco use.
- > Of random charts audited during site visits, greater-than or equal to 90% had a yearly height, weight, blood pressure and body mass index documented.
- SBHC staff work closely with school personnel and have been able to document improved grades for students who were previously struggling.

Best Practices for Prevention in SBHCs

LaCHIP Enrollment

LaCHIP is a health insurance program designed to bring quality health care to uninsured children and youth up to the age of 19 in Louisiana. SBHCs assist children and their families in the enrollment process and have seen a dramatic decrease in the number of students registered in the SBHC without insurance (see graph).

Currently, eligibility for LaCHIP is based on families whose income is 200% of the federal poverty level or below. The Louisiana Legislature passed Act 407 in 2007, the intent of which is to increase eligibility to enrolled families between 200%-300% of the federal poverty level. Pending federal funding of this expansion of LaCHIP, more families in Louisiana will qualify and ultimately more children will be eligible to enroll in LaCHIP.1

Type 2 Diabetes Screeing and Management

Type 2 diabetes is the most common form of diabetes. Statistics show that about 90 to 95 percent of people with diabetes have type 2. The risk factors for this form of diabetes include: older age, obesity, family history of diabetes, previous history of gestational diabetes, physical inactivity, and certain ethnicities. About 80 percent of people with type 2 diabetes are overweight.

"Clinically based reports and regional studies also show that type 2 diabetes, although still rare, is being diagnosed more frequently in children and adolescents, particularly in American Indians, African Americans, and Hispanic/Latino Americans."2

In an effort to address the increased prevalence of obesity and therefore of type 2 diabetes in Louisiana youth, SBHCs instituted a diabetes screening and management program in 2002 whose main purpose is to:

- 1. Identify children and adolescents with type 2 diabetes among at-risk students seen at the SBHCs.
- 2. Prevent/delay the complications associated with type 2 diabetes through early identification and treatment.

Results

In the 2006-2007 school year, 1151 students at risk were screened for type 2 diabetes at SBHCs across the State and 21 (1.8%) of the screened students tested positive for type 2 diabetes. These students will continue to receive treatment and education from their primary care clinicians as well as diabetes management services at SBHCs.
